

Batch 1 Validation - Team 1 - Power Rangers

N.	User Story	Points	Validation Factor	Aspect	Original (v1)	Reval (v2)	Feedback	Grade (v1)	Grade (v2)	Grade
1	As a user, I want to login using my SWITCH credentials, so that I can access SEWorld Once the SEWorld website is loaded, users can login via SWITCH Edu-Id credentials. If they are not logged in, the page will show a "login" button that will redirect the user to the eduid login page. The user needs to be a USI user.	10	1	Requirements			Ok.	10	10	10
				Usability						
				Implementation						
2	As a user, after logging in, I can get the list of topics. A logged-in user can see the list of the available topics. If the user is a student, each topic has a completion stage, depending on how many exercises have been successfully completed (among the available ones).	5	0.8	Requirements	-10%	2.5%	Previous Requirement issues fixed; Little bonus for the nice search bar. Please check the alignment of the search bar w.r.t. the page.	3.25	3.3	3.3
				Usability	-5%					
				Implementation	-20%	-20%	Missing representation invariant in Topic - please document it and implement it. Class has no logic, it's anemic (like many others in the code - all the logic is on the service - this is against OOP and DDD).			
3	As a user, I have my SEWorld profile In a dedicated page, users can see their profile, where they can inspect information about their basic corresponding identity at USI (e.g., username, email address). Moreover, they see some basic statistics about the topics they have completed in SEWorld. Profiles are only internally public, i.e., they are available to all logged in users, but invisible if a user is not logged in.	5	0.8	Requirements	-25%		Previous issues fixed.	3.75	3.9	3.9
				Usability		-2.5%	When you inspect the profile of someone else, the chart label still says "your grade" while it is meant to display the grade of the profile you are inspecting.			
				Implementation						
4	As a student, I can access the topic materials As a student, I can access the materials for each topic on a dedicated page.	5	0.8	Requirements	2.5%		Nice rendering of markdown	4	3.4	4
				Usability	-2.5%	2.5%	Nice icons and sorting, with file types and filtering criteria.			
				Implementation	-20%	-17.5%	Material class is anemic. No logic at all there, no representation invariant. Unclear in the case of a link where the link is actually stored (-20%) Good storage of pdfs internally (Little bonus +2.5%)			
5	As an instructor, I can access the topic materials and edit them. As an instructor, I can access the materials for each topic on a dedicated page. I can add new types of content (e.g. an external link), edit the currently available materials, or delete some of them.	5	1	Requirements		2%	Confirmation mechanism for deletion: Nice. Not revalidated.	4.6	4.85	4.85
				Usability						
				Implementation		-5%	Double edit doesn't work very well, content is temporarily lost.			
6	As a student, I can access the topic exercises. A student can see the list of exercises and decide to access one of them. Students can access exercises that have already been solved as well.	5	1	Requirements			Not Revalidated.	4.75	4.75	4.75
				Usability		-5%	Style is different w.r.t. the list of topics. (gray is also not that readable).			
				Implementation						
7	As a student, I can see the feedback over a solved exercise. A student access an exercise that has been already attempted and obtain feedback.	5	1	Requirements			Not Revalidated.	4.75	4.75	4.75
				Usability	-5%	-5%	Feedback uses all decimal digits (Probably fixed?)			
				Implementation						
8	As a student, I can attempt an exercise. As a user, I can attempt a novel exercise that I've never attempted or attempt again an exercise that I've tried already.	5	0.8	Requirements		-5%	No way to see if there is an attempt not submitted, it gets checked only in a modal.		2.6	2.6
				Usability						
				Implementation	-30%	-30%	Bug fixed. Missing representation invariant in Attempt - please document it and implement it. Class has no logic, it's anemic (like many others in the code - all the logic is on the service - this is against OOP and DDD) (-30% - counts partially as of User Story 7)			
9	As a teacher, I can add a new exercise As a teacher, I can add a new exercise, editing the basic attributes of it. The exercise is by default on a draft status and it is not available to the students.	5	0.8	Requirements				4.75	3.9	4.75
				Usability		-2.5%	Alignment of list of exercises is a little off.			
				Implementation			Validation for empty keywords fixed.			

N.	User Story	Points	Validation Factor	Aspect	Original (v1)	Reval (v2)	Feedback	Grade (v1)	Grade (v2)	Grade
10	As a teacher, I can edit an exercise in draft status. As a teacher, I can edit an exercise in draft status by adding, deleting, and editing new questions. The questions are numbered and ordered in a dedicated exercise view.	5	1	Requirements		-10%	Validation: It is possible to add empty multi-choice questions with no alternatives.		3	3
				Usability		-10%	No visual clues that there are unsaved edits that can be lost.			
				Implementation		-20%	Validation only in frontend, not in backend. List ordering is lost on saving, left completely to DB behavior. Lots of TD in backend, including anemic design and double navigable associations with no clear reason for that.			
11	As a teacher, I can preview an exercise. As a teacher, I can preview an exercise and see it on a view that is identical (or very similar) to the one of a student that attempts it. I can also simulate the end of the attempt and obtain a feedback..	5	1	Requirements		-5%	No preview in published exercises anymore (not sure why)		4.5	4.5
				Usability		-5%	When previewing, you're implicitly saving the exercise with all the modifications - that should require confirmation.			
				Implementation						
12	As a teacher, I can remove the draft status and make an exercise available for student attempts. As a teacher, after finishing editing an exercise, I can remove the draft status and make it available for students to perform attempts. After an exercise has been made available, the exercise cannot be edited anymore, but it can be potentially removed.	5	0.8	Requirements			Ok	5	4	5
				Usability						
				Implementation						
13	As a teacher, I can see the statistics of an exercise attempts by the students. As a teacher, when an exercise has been published and there are attempts by the students, I can see the resulting statistics (e.g., the number of students who did the attempts, how many questions were answered correctly, etc.)	5	1	Requirements			Basic statistics ok.		5	5
				Usability						
				Implementation						
				Other Comments			There are a lot of design issues in the code, in particular no logic in the model classes and no representation invariants. This constitutes a huge part of technical debt. Having some logic in the services it's fine - having no logic in the model is not fine, since then the model is just made of data aggregates and that is against OOP and Domain Driven Design.	-2	-2	-2
Validated Points		70					Total points			58.4
